PROFESSIONAL SUMMARY

Data Analyst and Business Intelligence professional with 6+ years of experience delivering SQL-based analysis, Power BI dashboards, KPI reporting, and data-driven insights across retail, banking, and financial services. Skilled in advanced SQL, DAX, Power Query, Excel, Python, and dimensional data modelling. Experienced in analyzing complex datasets, validating data accuracy, automating recurring reports, and translating stakeholder requirements into actionable business intelligence solutions. Strong background in financial reporting, retail operational analytics, data reconciliation, and cross-functional collaboration.

TECHNICAL SKILLS

Data Analysis & Reporting: SQL, T-SQL, Power BI Desktop & Service, DAX, Power Query, Advanced Excel, Python, KPI Analysis, Trend Analysis, Ad-hoc Reporting

Data Modelling & Databases: SQL Server, SSAS Tabular, Star Schema, Snowflake Schema, Dimensional Modelling, Snowflake

Data Quality & ETL: Data Cleaning, Data Profiling, Data Validation, Reconciliation, SSIS, Azure Data Factory, SQL Server Agent

BI & Analytics: Power BI Semantic Models, Dashboard Development, Paginated Reports, Power BI Report Builder, Data Visualization, RLS/OLS

Cloud & Collaboration: Azure SQL, Azure Data Lake, Azure Synapse, Microsoft Fabric, Git, Azure DevOps, Agile/Scrum, UAT, Stakeholder Requirements

PROFESSIONAL EXPERIENCE

Data Engineer / BI Developer

Client: Best Buy Ltd, Canada | October 2025 – Present

- Developed Power BI dashboards and operational reports to analyze retail sales, inventory, customer, and business performance metrics, supporting stakeholder reporting and decision-making.
- Designed Power BI semantic models and advanced DAX measures to calculate business KPIs, analyze trends, and deliver consistent reporting across operational datasets.
- Collaborated with business stakeholders and BI teams to gather reporting requirements, identify gaps in existing datasets, and recommend improvements to dashboards and analytical outputs.
- Developed Python-based automation scripts for report generation, formatting, data validation, and delivery, reducing repetitive manual reporting activities.
- Created reusable YAML configuration files and scheduled SQL Server Agent jobs to standardize recurring report execution and distribution.
- Performed SQL-based data extraction, transformation, reconciliation, and root-cause analysis to investigate reporting discrepancies and improve data reliability.
- Partnered with QA and engineering teams to validate business logic, report accuracy, and data quality before production releases.

Power BI / SQL Developer
Client: Amdocs | March 2022 – August 2025

- Developed interactive Power BI dashboards and paginated reports to analyze merchant transactions, financial performance, lending metrics, and business KPIs.
- Created advanced DAX measures, SQL queries, and Excel reporting models for financial trend analysis, performance monitoring, and stakeholder reporting.
- Presented financial KPI dashboards to business stakeholders and executives, communicating analytical findings in an understandable and actionable format.
- Designed SSAS tabular models and dimensional datasets to support financial reporting and reusable business metrics.
- Developed SQL transformations and SSIS workflows to integrate, cleanse, standardize, and validate data from multiple sources.
- Implemented Row-Level Security (RLS) and Object-Level Security (OLS) to support controlled access to sensitive financial reporting data.
- Participated in user acceptance testing, data discrepancy investigations, and reporting improvements in collaboration with business and technical teams.

BI Developer
Client: HSBC | May 2020 – February 2022

- Supported migration of financial reporting solutions from SSRS to Power BI, improving accessibility to reporting for more than 1,000 finance and operations users.
- Developed Power BI dashboards, DAX calculations, and SSAS tabular models for financial performance tracking and operational reporting.
- Used SQL and Python to compare datasets across multiple sources, investigate reporting discrepancies, and validate financial reporting outputs.
- Optimized T-SQL queries and supported data cleansing, transformation, and reconciliation to improve data consistency and reporting performance.
- Collaborated with business stakeholders to review reporting requirements, validate KPIs, and support reporting releases.

Healthcare Pharmacy Analytics Dashboard
Technologies: SQL Server, Power BI, DAX, Power Query, Python, Pandas
View GitHub Project

- Designed a star-schema data warehouse to analyze more than 100,000 pharmacy claims records using SQL Server.
- Developed SQL scripts for data extraction, transformation, validation, and KPI calculations.
- Used Python and Pandas to clean and prepare pharmacy claims data, handle missing values, standardize fields, and calculate cost-related metrics for downstream analysis.
- Built three interactive Power BI dashboards: Executive Summary, Drug Analysis, and Provider Analysis.
- Analyzed drug spending, provider performance, specialty-wise claim patterns, and state-level healthcare expenditure using DAX measures and interactive visualizations.

EDUCATION

Bachelor of Engineering — Computer Science
Acharya Nagarjuna University, India | 2016 – 2020
